Analysis summary

Financial grade C Under pressure | 81.25 / 100

Operating cash quality require further checks.

2025 annual period · Consolidated scope · Public sources Rule-based analysis

AI was not called for this analysis; rule results are shown.

Synthetic acceptance: core dimension cap.

Consolidated net profit	Operating cash flow	Cash-to-profit ratio
100.00 CNY	50.00 CNY	50.00%

Operating cash ÷ consolidated profit; not a sales collection rate.

Review framework

Questions, sources and gaps

▼

Review questions and evidence gaps for this record; consult the research process for actual retrieval and review.

Selected entity

核查框架验收夹具股份有限公司（合成示例） · 300893

Research goal

Review operating cash, financial changes and material public events, retaining competing explanations and unknowns.

Evidence scope

Financial comparison requires: 2025 annual period · Consolidated statements · CNY
Keep public web fields, retrieved disclosure excerpts and adopted originals separate; web data does not automatically become confirmed original evidence.
Historical statements do not establish currently available cash, actual performance or payment safety; specific conditions require direct evidence.

Source

10/01/2026, 10:00 snapshot

Review questions

1. Does the evidence belong to the selected entity? Basis available

Entity identifiers are recorded; they do not establish the relationship between a brand, outlet, contracting party and payment recipient.

Evidence needed: Original entity records and contracting/payment-recipient relationship evidence.

2. Can this year's profit and operating cash be compared on the same basis? Basis available

Comparable amounts are available; their causes still require original and operating evidence.

Evidence needed: Same-year consolidated originals, cash-flow supplements and records supporting the explanation.

3. Are operating changes observed facts, plans or inferences? Basis available

Adjacent annual fields can be compared; balance changes alone do not establish causes.

Evidence needed: Original disclosures, actual orders, subsequent sales and collections.

4. Have material disclosure clues been checked against originals? Insufficient evidence

This snapshot has no verifiable retrieved disclosure excerpt; headlines remain clues.

Evidence needed: Relevant original disclosures, page references and full context.

5. Which competing explanation or new evidence would change the judgment? Clues to verify

The source-bound report conditions below are retained; they are conditions to test, not future facts.

Evidence needed: Supporting and contrary originals, plus direct evidence distinguishing the explanations.

Source coverage in this snapshot

Evidence	Saved items	Retrieved excerpts	Use limits
Selected-year web financials	1	Web fields	Retain the web-field scope; originals require separate adoption.
Disclosures and excerpts	0	0	Retrieved counts refer to saved excerpts, not full documents.
Media items and excerpts	1	0	Reposts do not provide independent confirmation; reporting still requires verification.
Public posts and excerpts	0	0	Unverified opinions in the current sample, not the views of all people.

Source attempt records 1 • Retrieval failed 0. Item counts are neither independent evidence-chain counts nor confidence probabilities.

Requirements for a supported judgment

- Verify the entity, annual period, consolidated scope and currency; missing or conflicting fields pause dependent comparisons.
- Trace key judgments to amounts, formulas or retrieved sources; retain the limits of headlines and media opinions.
- Keep the basis for supporting and competing explanations separate, with missing materials and incomplete steps visible.

Direct evidence to verify

These materials are needed for review; this public research does not establish that they have been obtained. Check the entity, period and scope before use.

- Subsequent collections, receivable aging and related contracts: distinguish settlement timing from persistent noncollection.
- Inventory mix, aging, impairment and subsequent sales: distinguish normal stocking from sell-through pressure.
- Restricted funds, debt maturities and actual repayment arrangements: verify currently available funds and obligations.
- The contracting-party/payment-recipient relationship, performance and refund terms: provide direct evidence for specific payment conditions.

Change conditions in the report

Evidence snapshot: 10/01/2026, 10:00

Subsequent collections and aging evidence may change the explanation (synthetic acceptance copy).

Sources and reading scope

Source snapshot • 10/01/2026, 10:00

Retrieved excerpts	Digests	Titles or indexes only	Failed provider reads
0	0	1	0

Counts describe the inspected entries below. Excerpts are not full documents, and media or public opinions are not verified facts. Independence is unknown; platform or repost counts do not establish independent corroboration.

Entry and location	Reading scope	Record date	Retrieval status

Key findings

- 01
- Operating cash trails consolidated profit, indicating weaker cash realization; the ratio alone does not establish a cause.

Next checks

- 01
- Check subsequent collections, receivable aging and inventory sell-through records.

Originals and follow-up evidence

Original evidence is incomplete. Inspect the retrieval record or add your own financial records.

Originals incomplete

1. Collect evidence beyond current source coverage

Credit records, current registration, bank statements, tax records and key contracts from the company or authorised sources

Do disclosures align with internal records? How can missing evidence be obtained?

These are requested records, not evidence already obtained or authenticated.

Before a payment, separately check the contracting entity, payee account, delivery and refund terms. The public-data gap still requires subsequent collections, ageing and inventory records.
